UNIVERSAL DOUBLE ROLL CRUSHER

The Universal Roll Crusher is a field proven crusher designed to follow a primary or other reduction crushers in either rock or gravel and is ideal for manufacturing coarse sand. By design, it ensures uniformly sized material with less oversize thus reduces recirculating loads in your crushing circuit boosting capacity. When properly fed, the Universal Roll Crusher lowers your cost of operation by gaining full utilization of the manganese roll shells. The Roll Crusher's highly efficient rubber tire drive system on anti-friction bearings further reduces power loss in transmission to give you better use of your power input and lower consumption per ton of finished material. Rugged, dependable crushers, built to give you years of efficient profitable service. They are easy to install and require lighter foundations and structures than other types of crushers doing the same job.

Standard Design Features:

- Rugged Roll Assemblies - Roll Shells smooth or corrugated are mounted over tapered cores and rings making shell replacement easier.
- Hydraulic Shim Adjustment - This feature makes product changes fast and simple to give the roll crusher greater application flexibility.
- Safety Springs - Maintain compression against floating roll to assure positive crushing action and sizing while allowing tramp iron to pass through.
